## WinTasks 5 Administrator - Troubleshooting Made Easy

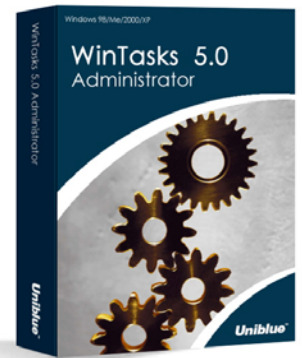

The ultimate troubleshooting utility software that arms system administrators with a comprehensive set of tools to stay in full control of systems in their care.

Today, anyone responsible for computer maintenance spend more time and resources than ever before searching for system problems. These problems take the form of errors, resource hogs and bottlenecks due to spyware, Trojans, worms and other harmless but unnecessary background processes. Tighter schedules and deadlines, heavy work loads and pressures to minimise administration downtime make it even more important to find tools that help **save time**, be **more effective in troubleshooting and problem solving**.

WinTasks 5.0 Administrator is an **easy-to-use** diagnostic and problem solving utility specifically designed for anyone responsible for managing and maintaining **any number** of PCs and servers. By installing and running it on ten computers at a time and your will be to troubleshoot all the systems under your care.

WinTasks 5.0 Administrator provides you with a **wealth of information** to help you **track down system security threats** and **hunt down computer performance problems** in minutes. It provides you with comprehensive information on all running processes and their DLLs. Rather than spending hours sifting through registry files, WinTasks will provide you with the appropriate troubleshooting tool to maximise your effectiveness and save time.

WinTasks 5.0 Administrator also provides you with a **powerful set of tools** to assist you control and **enhance the protection** of **desktops** and **servers** while **dramatically increasing performance**. Stop and block malicious programs designed to disrupt and damage systems; identify and anticipate problems and bottlenecks; and, prevent all causes for computer slowdowns and crashes.

*"If you are looking for a true Windows performance-enhancement utility, consider WinTasks."*

CNET

*"Turns out to be something you wondered how you lived without."*

# WinTasks 5 Administrator – Security Made Easy

Features	Standard	Pro/Admin
<b>System information displays the following:</b>		
Number of processes running on the system.	✓	✓
Total CPU and memory usage.	✓	✓
Total physical memory.	✓	✓
CPU and memory usage graphs for up to 24 hours.		✓
<b>Process Library allows you to:</b>		
Read simple explanations for all processes.	✓	✓
Access detailed information about processes, such as author and official process name.	✓	✓
Use process categories including security risks and system processes.	✓	✓
Include personal notes for any process, which you can easily copy to a new system.	✓	✓
Search our entire process library database for any listed process.	✓	✓
Report and comment on any missing process information.	✓	✓
View detailed information for every listed process.	✓	✓
Use the update feature to download the latest process library definitions.	✓	✓
<b>Real-time Process Information allows you to:</b>		
See user friendly process names, for example: "Google - Microsoft Internet Explorer" instead of "explore.exe".	✓	✓
Get executable name with full path, for example: C:\Program Files\Internet Explorer\IEXPLORE.EXE.	✓	✓
Read exact process priorities, for example: Normal(9).	✓	✓
See number of threads used by each process.		✓
Get real-time CPU and memory usage per process.	✓	✓
Sort processes by creation time to find new processes with ease.		✓

# WinTasks 5 Administrator – Security Made Easy

Get executable file properties and version information.	✓	✓
Edit the name of a process to assign your own names to common processes.	✓	✓
Access CPU and memory usage graphs per process for up to 24 hours.		✓
Use printable and exportable process reports, including detailed information about all running processes.		✓
<b>Process Management Features allow you to:</b>		
Stop many processes with one click.	✓	✓
Easily change process priorities.	✓	✓
Launch new processes at any time.	✓	✓
Create process presets to quickly restore all running processes and their priorities, while removing any processes not included in the preset.		✓
Add any selected process to the block list with a single click.		✓
<b>Startup Manager allows you to:</b>		
Add new programs to the auto start sections in the registry.		✓
Remove auto started programs permanently by deleting their registry entries.		✓
Disable and enable auto started programs, temporarily allowing you to test different Startup settings.		✓
Identify auto started programs quickly with automatic process descriptions.		✓
<b>DLL Information includes:</b>		
Software lists all DLLs used by a process.		✓
DLL log show when DLLs are loaded.		✓
DLL descriptions for all common DLLs help you quickly identify any DLL.		✓
Printable and exportable DLL reports include information about all DLLs used by a process.		✓

# WinTasks 5 Administrator – Security Made Easy

<b>Logging Features allow you to:</b>		
Log CPU and memory usage for up 24 hours.		✓
Log information about executed programs, DLLs, and windows for any period of time.		✓
Save detailed process information to text files, which can easily be imported into custom applications and databases.		✓
<b>Window Management includes:</b>		
Feature lists windows per process with detailed information such as titles, visibility, and states.		✓
Window log shows when windows are created and closed.		✓
The possibility to close any number of windows with one click.		✓
The possibility to control window states, sizes, and visibility, allowing you to show or hide any program.		✓
<b>Scripting Language includes:</b>		
Feature creates scripts that run silently in the background, monitoring and controlling all running programs.		✓
Scripts can access detailed process information, such as CPU and memory usage, to automatically control priorities and terminate suspicious processes.		✓
Scripts can search for specific executables and stop unwanted processes as soon as they are launched.		✓
Information, such as window titles and names, can identify processes related to specific documents and web pages.		✓
Scripts can start new processes and stop existing ones when certain conditions are met, allowing you to automate complex tasks and remove processes that are no longer needed.		✓
<b>Block/Allow Lists allow you to:</b>		
Add all unwanted processes to your block list to ensure that the processes are never again allowed to run again on your system without your permission.		✓
If you need maximum security you can use the allow list to specify exactly which processes are allowed to run your system.		✓

# WinTasks 5 Administrator – Security Made Easy

<b>Additional Features do the following:</b>		
WinTasks can automatically be loaded as a background task when the computer is rebooted, allowing your scripts and logging tasks to run at all times.	✓	✓
You can easily customize the user interface of the software, allowing you to adapt WinTasks to your needs.	✓	✓
You can easily print or export information to Microsoft® Word documents and spreadsheets.		✓
